

ELECTROBOX

MOVING FORWARD

At XAP Technology, we are excited to introduce a brand new product focused on the future of retrofit, which can equip any small power vehicle that has undergone this modification.

An electrobox capable of integrating all the electrical components related to the high voltage power management of all the cells that make up the battery of your retrofitted vehicle.

The electrobox is compact and easily accessible within your vehicle, making it easier to perform checks and verifications of any faulty components during a breakdown.

Upon request, we can resize it to equip larger vehicles that require more power.

BUILT TO HANDLE MORE

FULLY VERSATILE

FACILITATES DIAGNOSTICS AND TROUBLESHOOTING
EASY TO INSTALL AND EASY TO MAINTAIN

TECHNICAL SPECIFICATIONS

[illegible]

Why choosing XAP ?

XAP designs, develops, and manufactures high-precision mechatronic systems for demanding environments: motorsport, e-mobility, aeronautics, marine, and advanced industries.

By combining electronics, mechanics, and embedded software, we deliver tailor-made solutions such as electronic boards, complex housings, and intelligent software. Our expertise spans electric vehicle conversion, advanced energy management, prototyping, and reverse engineering.

With our design office and manufacturing workshops integrated on a single site, we ensure optimal responsiveness from concept to final testing. Sustainability, artificial intelligence, eco-design, and advanced materials are at the core of our continuous innovation.

Your satisfaction, our driving force!
